Introduction and Methodology

Alberta Retail Food Prices – June 2008

Objective of the Survey

The purpose of the survey is two-fold:

a) ***In the agri-food sector:*** To establish a historical series of benchmark retail food prices for several communities across Alberta similar to the Edmonton data series that has been in existence since the early 1970's. The survey provides accurate and reliable regional data on food prices, and total food costs, for use in business analysis and planning.

b) ***In the health care services sector:*** To provide data for use in programs involving food security issues, including prenatal nutrition, special nutrition needs such as diabetes, general nutrition education and policy, planning and advocacy.

Data Collection

By partnering with several regional health representatives of Alberta Health Services, Alberta Agriculture and Rural Development has been able to collect data in more than 90 communities across Alberta since the survey began, in early 1996. The number of participating communities changes in each survey, with new communities being priced each year.

Regional health representatives of Alberta Health Services, all of whom are either registered dieticians or nutritionists, are responsible for collecting the prices at the retail grocery outlets in their communities. Those who are unable to collect the data themselves, utilize the services of trained volunteers and student interns to do the data collection. Due to this arrangement, the survey is very economical, and costs very little to the Alberta taxpayer.

Publication of the survey

The publication of survey results is governed by the Statistics Act of Canada, which prohibits the disclosure of confidential information. Accordingly, the prices shown in this report represent weighted averages of several retail stores, gathered in the same week. Further, information from communities with less than three retail grocery stores are combined with other communities within the same health region, or geographic location or suppressed completely. It is assumed that the number of retail grocery outlets in a community is a reliable indicator of consumer demand and, therefore, an adequate proxy for human population. The retail food prices shown are averages for each of the participating Alberta communities for a specific week, and cannot be directly related to individual store prices in any community.

Data for the following communities were combined by Alberta Health Services health region boundaries for the June 2008 survey:

-Barrhead/Westlock

-Cardston/Fort Macleod

-Carstairs/Crossfield/Didsbury

-Cold Lake/Elk Point

-Falher/Grande Cache/McLennan

-High Level/La Crete

-High Prairie/Valleyview

-Morinville/Onoway

-Spirit River/Rycroft

-Vermilion/Wainwright

-Whitecourt/Mayerthorpe

Comparisons

Survey results from the previous survey (February 2008) and the survey conducted a year prior (June 2007) have been included where available, for use in comparing retail food prices within the same community over time.

Caution should be exercised when comparing retail food prices between different communities. Grocery stores are often competitive with their "in-house" and generic brands and not necessarily with national brands. Since it is necessary to have standardized pricing to achieve the benchmarks, national brands were chosen in order to ensure uniformity in quality and availability.

Choosing the Basket of Food Items

To obtain a benchmark pricing standard, specific national brands and sizes must be chosen for the list of food items priced. This is essential to ensure that differences in food costs are real, and not due to inconsistencies in quality found between different brands. The price survey form is very detailed with respect to the specifications for each food item in order to avoid inconsistencies due to brand and size selection and substitution rules.

In 2004, a review of the survey was undertaken to ensure that the latest information available from Health Canada's *Food Guide to Healthy Eating* and Statistics Canada's *Family Food Expenditure Survey* was reflected in the basket of food items priced. The updated basket was more realistic in terms of balance between variety and nutritional value. Another review was conducted in 2008 and the basket is currently being updated to reflect the latest information.

Acknowledgments
Assistance from regional health representatives of Alberta Health Services is gratefully acknowledged.
